## Abstract of JP 10257449 (A)

**PROBLEM TO BE SOLVED:** To provide a method, device for displaying program guidance and a program guidance information supply method with which convenience for viewers is improved and problems in the security of broadcast system are solved by instantaneously displaying the program guidance of arbitrary program out of the programs of multichannel digital broadcast. **SOLUTION:** The multichannel digital broadcast is transmitted from a sender 16 at a broadcast station and received through a satellite 18 by an antenna 20. The guidance information of all the programs in addition to images and sounds is multiplexed on the broadcasting of specified transmission channel. When that transmission channel is received, a tuner 10 supplies that received information to a personal computer 12. The personal computer 12 extracts the guidance information of all the programs out of the received information through an interface board 28, temporarily stores that information in a RAM 42, converts it into an HTML file and stores that file on a hard disk 54. The stored HTML file is displayed in the form of program table on a display 14 while using a browser software for home page reading.
